

Civility Poll

October 26th, 2018

Sample size and population sampled:

1,501 adults (18+) registered voters in the U.S.

Interview method: conducted online

Fieldwork dates: October 23rd – 24th, 2018

Methodology:

The survey was conducted online between October 23rd – 24th, 2018 using stratified sampling. Respondents were selected to be representative of registered voters living in the U.S. based on age, gender, ethnicity, education and census region.

In order to achieve a representative sample, figures from the U.S. Census Bureau were used to derive weighting targets. The final survey data was weighted by age, gender, ethnicity, census region and 2016 Presidential election vote.

All questions appear in the order in which they were shown to respondents. The final computer tables show weighted crosstab data for the following variables: gender, age, ethnicity, census region, education, household income, 2016 presidential vote and political identity.

This survey has a margin of error of 2.53% at the 95% confidence level. The margin of error within specific demographics (crosstabs) is significantly higher due to the smaller sample size. Due to the effects of rounding some figures may not equal 100%.

Civility Poll 10.26.2018

Q1: There has been a lot of discussion lately about the tone and civility of political debate in the U.S. What do you think about the tone of political debate in the U.S.? Is it...?

Weighted number: 1,501

	Gender		Age					Ethnicity				Census Region			
	Male	Female	18-34	35-44	45-54	55-64	65+	White	Hispanic or Latino	Black or African American	Asian	Northeast	Midwest	South	West
